CORE SKILLS

Python

SQL / PostgreSQL

Docker

Webhooks & APIs

Data Cleaning (Pandas)

React & NestJS

Prisma ORM

EDUCATION

B.Sc. Management Information Systems (MIS)

HIMS Katameya

PROFESSIONAL SUMMARY

Results-driven Software Engineer and MIS specialist with a strong foundation in backend development, database management, and data integrity. Proven expertise in Python and SQL, with hands-on experience in building AI-driven chatbots, automating complex workflows, and processing massive datasets. Highly skilled in technical troubleshooting and deploying full-stack solutions.

KEY PROJECTS & EXPERIENCE

Intelligent WhatsApp GPT-Bot

Python • UltraMsg API • Webhooks • PythonAnywhere

- Developed a fully automated, AI-driven messaging system integrated directly with WhatsApp.
- Configured secure Webhooks for real-time data processing and instantaneous user response.
- Deployed and managed the application environment on cloud servers ensuring high availability.

AI-Powered RFP Management System

NestJS • React • Gemini AI • Docker • PostgreSQL

- Developed a Full-Stack system to automate proposal management with **Gemini AI** integration.
- Containerized the entire environment using **Docker** for consistent development and deployment.
- Managed complex database migrations and resolved **CORS**/API routing challenges.

RFP Management Platform (Topcoder)

NestJS • React • PostgreSQL • Prisma ORM

- Engineered a comprehensive Full-Stack application to manage Request for Proposals (RFPs).
- Designed robust relational database schemas using PostgreSQL and Prisma for efficient data querying.
- Built scalable backend APIs linked to a responsive React frontend interface.

DataMill (Big Data Processing)

Python • Data Architecture • Automation

- Created automated data cleaning scripts capable of processing millions of rows accurately.
- Transformed unstructured, raw sales data into clean, highly structured, and business-ready CSV reports in minutes.

Inventory Radar System

SQL • Data Analytics • Alert Systems

- Developed a smart database-monitoring logic to track inventory levels in real-time.
- Implemented automated alerts to proactively identify product shortages before stock depletion.
